IT IS A UNIQUE INNOVATION TEXT AT INTERNATIONAL LEVEL: THE FIRST EVER DETAILED SCIENTIFIC COMPARISON BETWEEN MONTESSORI'S IDEAS AND THE NEUROSCIENCES.

The book presents two convergent works written by two university professors: an avant-garde neuroscientist interested in the possible repercussions of his knowledge on the education of the child, and a well known pedagogist who studies childhood behaviour but is also curious about the results of neuro-scientific research. It is the confirmation of how today the most promising and original contributions for the education of the child originate from brain research and new cognitive sciences.

RANIERO REGNI

Is a full professor of *Social Pedagogy* in the Department of Human Sciences of the LUMSA University of Rome, where he also teaches *Education to adults and intercultural education*. Great expert of Maria Montessori, he is one of the most original interpreters of her work at international level. His publications (books, essays, articles) are very numerous, including some essays of specific themes in collective books by Fefe Editore.

LEONARDO FOGASSI

Is one of the avant-garde Italian neuroscientists, professor of *Neurophysiology* at the University of Parma. He is part of Prof. Giacomo Rizzolatti's team, one of the most famous research groups in the world, that discovered the existence of "mirror neurons". Together with Prof. Rizzolatti, Fogassi in 2007 received the Grawemeyer Psychology Award.
